Akash Chakraborty

GitHub: Akash-18c
LinkedIn: Akash
Chakraborty

BCA student with a strong interest in machine learning, artificial intelligence, and data-driven applications. Hands-on experience in developing projects such as Fake News Detection and Twitter Sentiment Analysis using Python, Pandas, NumPy, and Scikit-learn. Skilled in data analysis, NLP, and problem solving with a passion for building intelligent solutions for real-world problems. Currently enhancing knowledge in machine learning and modern technologies while seeking an opportunity to begin a career in AI and software development.

SKILLS

Programming	Python, JavaScript, C
Frontend	React.js, HTML, CSS
Backend	Node.js, Express.js
Database	MongoDB
Machine Learning	NLP, Sentiment Analysis, Scikit-learn, Pandas, NumPy
Tools	Git, GitHub, Jupyter Notebook

PROJECTS

Fake News Detection

A machine learning based web application that detects whether a news article is fake or real using natural language processing techniques. Implemented text preprocessing, feature extraction, and classification models for prediction accuracy.

Technologies Used: Python, Flask, HTML, CSS, Scikit-learn, Pandas

Machine Learning Algorithms: Logistic Regression, Naive Bayes, TF-IDF Vectorization

GitHub: [GitHub Link](#)

AI Travel Agent

An AI-powered travel assistant that helps users plan trips, suggest destinations, and provide travel-related recommendations interactively. Focused on improving user experience with intelligent response generation and automation features.

Technologies Used: React.js, Node.js, MongoDB, AI APIs

Features: Smart Recommendations, Trip Planning, Interactive Chat Assistance

GitHub: [GitHub Link](#)

EcoZBite

A sustainable food and eco-friendly platform designed to promote healthy eating and environmentally conscious food management solutions. Developed responsive frontend interfaces and backend integration for smooth user interaction.

Technologies Used: React.js, Node.js, MongoDB

GitHub: [GitHub Link](#)

Twitter Sentiment Analysis

A machine learning project that analyzes Twitter posts and predicts sentiment polarity such as positive, negative, or neutral. Performed text cleaning, sentiment classification, and visualization using Python and Jupyter Notebook.

Technologies Used: Python, Jupyter Notebook, Pandas, NumPy, Matplotlib

Machine Learning Algorithms: Logistic Regression, NLP, Sentiment Analysis

RECENT WORK EXPERIENCE

Full Stack Development Intern

Logix Infotech LLP

Jul 2025 — Aug 2025

Noida, India

Worked in the Development Department on frontend and backend web application development using modern technologies.

- Developed responsive frontend interfaces using React.js.
- Collaborated on backend API development using Node.js.
- Assisted in database design and query optimization using MongoDB.
- Participated in debugging, testing, and application integration.
- Followed Agile methodology and version control practices during development.

Technologies Used: React.js, Node.js, MongoDB

EDUCATION	
Bachelor of Computer Applications (BCA) <i>Adamas University</i>	2023 – Present CGPA: 6.514
Higher Secondary Education (12th) <i>Higher Secondary</i>	2021 – 2023 68.8%
Secondary Education (10th) <i>Secondary</i>	2021 87.85%
